

GoHere App Development Project: Sprint 3 Task Assignments

As the GoHere app development project enters its final sprint, the focus shifts towards refining existing functionalities, ensuring robust integration, and addressing any outstanding bugs. The tasks for Sprint 3 are carefully allocated among team members to capitalize on their strengths and areas of expertise. Here's a detailed breakdown of the tasks assigned to each team member for Sprint 3:

Ismail:

- **Primary Task:** Bug fixes and integration of various app components to ensure seamless operation and user experience. Ismail will focus on identifying, prioritizing, and resolving any bugs that emerge during the sprint, particularly those affecting app integration.
- **Additional Responsibility:** Jira management. Ismail will also oversee the management of tasks, bugs, and features within Jira, ensuring that all team members have clear directives and that progress is accurately tracked and reported. This includes updating tasks, monitoring sprint progress, and facilitating communication among team members regarding task status.

Mark:

- **Task:** Development of the Home page navigation functionality. Mark is responsible for enhancing the navigational elements of the app's home page, focusing on user experience design and ensuring that users can intuitively navigate through the app's features.

Jason:

- **Task:** Backend development for CCC02. Jason's efforts will be dedicated to building and refining the backend services necessary for CCC02, ensuring stability, efficiency, and security in data handling and processing.

Liang Ma:

- **Task:** Backend development for CCC05. Liang Ma is tasked with creating the backend logic and services for CCC05, focusing on supporting the feature's requirements and integrating with the frontend to provide a cohesive user experience.

Jun Kai:

- **Task:** Development of the map pin functionality. Jun Kai will work on implementing a feature that allows users to place and interact with pins on a map, a crucial aspect of the app's functionality that enhances user engagement and utility.

Ankhjargal:

- **Task:** Backend development for CCC03. Ankhjargal will focus on developing the backend infrastructure for CCC03, ensuring that it supports the feature's needs and integrates smoothly with the app's other components.

Throughout Sprint 3, each team member will also participate in integration testing, feedback sessions, and sprint review preparations, contributing to a collaborative effort to polish the GoHere app and prepare it for launch. The team's collective goal is to address any remaining challenges, finalize all features, and ensure the app is robust, user-friendly, and ready for deployment.
